Subject: Riverside Ag Park - Offsite Evaluation Work Group _ Rescheduled for Feb 5th

When: Friday. Eebruary 05. 2016 9:00 AM-11:00 AM (UTC-08:00) Pacific Time (US & Canada).

Where: Ex. 6 Personal Privacy (PP)

Appointment rescheduled based on Cal/EPA request. Friday February 5th from 9 AM through ~11 AM is the new time.

Thanks! Maryam

Good Morning!

This meeting is a follow up to the December 10th call regarding the scope and objectives for the Riverside Ag Park Off-site Evaluation. I could not find a time where we had 100% availability of all team members, but this date and time seemed to work for the majority. I have set up the appointment as tentative, and will update/adjust pending confirmation. The twelve questions presented in December have been rearranged to aid discussion and still require a response; however, we have been asked to focus particularly on question number 9, which I have highlighted in the list below. If you would like any specific information prior to our call, please let me know.

- 1. Given that several (*four*) homes were sampled prior to cleanup and PCB concentrations were below 0.22 mg/kg, and that none of the dust samples analyzed for PCBs during the cleanup had detectable concentrations of PCBs, what is the technical justification to conduct off-site perimeter sampling for PCBs?
- 2. What is the objective of evaluating the off-site Riverside Ag Park perimeter?
- 3. What are the benefits of the evaluation of the off-site Riverside Ag Park perimeter?
- 4. What is DTSC's regulatory authority for the evaluation of the off-site Riverside Ag Park perimeter?
- 5. What is the funding source for the evaluation of the off-site Riverside Ag Park perimeter?
- 6. If sampling is conducted, what would be the specific question that DTSC would attempt to answer by collecting data? For example:
- a. Did the removal of PCB-impacted soil during the Phase 1 and Phase 2 Response Plan implementation result in dispersal of PCBs into the immediately surrounding neighborhood?; or,

- b. Did historical operations at the Former Camp Anza and the Riverside Ag Park have an impact on the health of residents living in homes built within the boundaries of the Former Camp Anza?
- 7. What chemicals of potential will be targeted for the evaluation of the off-site Riverside Ag Park perimeter? connected to response to question 6.
- 8. What geographic boundaries are to be included in the evaluation of the off-site Riverside Ag Park perimeter? connected to response to question 6.
- 9. If sampling is conducted, what would be the strategy under the following circumstances:
- c. Concentrations are not detected;
- d. Concentrations are detected, but are individually below regulatory limits or background levels;
- e. Concentrations are detected both above and below regulatory limits or background levels, but a risk evaluation indicates that the combined levels are within the acceptable range; or,
- f. Concentrations are detected at levels that pose an unacceptable risk.
- 10. If sampling is conducted, on what basis will DTSC select the initial sampling locations? *connected to response to question 6.*
- 11. What is the end goal and DTSC's exit strategy for the evaluation of the off-site Riverside Ag Park perimeter? connected to response to question 6.
- 12. If sampling is conducted, what would be the strategy to ensure that the residents within the defined study boundaries are informed and are supportive of DTSC's actions?
